OPERATING ENVIRONMENT AND EQUIPMENT

The usability laboratory includes a soundproof observation room with a one-way mirror and a modifiable testing room, eye tracking equipment and a software package intended

for usability testing. Equipment and software support the usability testing of devices, software, mobile applications and websites and various observation studies.

OPERATING MODEL AND SUPPORTING SERVICES

Companies and other organisations can offer training, project and thesis topics to students, in order to utilise the perfect setting. In addition, specialists of companies are able to utilise the opportunities offered by the usability laboratory to carry out usability tests and, for example, observation studies for marketing materials.

Testing room

Observation room

Tobii X2-60™ equipment for eye tracking analysis of screen based user interfaces in a variety of research environments

Mobile Stand™ additional device for eye tracking analysis for mobile applications and devices

Tobii Glasses 1™ eye tracking analysis equipment for observation studies of objects located in the environment

Morae™ usability testing software for recording, analysing and presenting testing results
